FOOD INDUSTRY AND CATERING

Hygienic and sustainable

What to do with meat, fruit and vegetables and other foods?

We have the solution! Sturdy reusable containers and pallets made of plastic, hygienic and versatile, suitable for all stages: from picking or production, through storage and transport to the sales presentation at the POS.

The use of reusable storage and transport containers means that there is no waste from cardboard boxes or wooden crates.

This is a sustainable way of protecting the environment.

Practically good enough to eat

Crate

The robust, weatherproof crate for fruit and vegetables can be safely stacked.

GLAS MANAGER

These are provided as an insert in the RAKO container for safe transport and storage packaging for all types of drinking glasses. Thanks to a patented grid, they can be individually adapted to the height of the glass. For washing glasses, the filled GLAS MANAGER can be placed directly into the dishwasher.

Stack/nest containers

Empty containers use up valuable room, whether in the warehouse or on the lorry. Stack/nest containers solve this problem: empty, they can be nested into one another in a small space – so you save 80 % volume.

E Performance meat container

Four in-mould labels with container identification and GS1 code permit the container's unique identity. The light blue colour guarantees that only new material is used for the production of these containers.

GASTRO-NORM trays

In these plastic containers with lid, food can be immersed in a water bath and therefore heated and kept warm.

Meat containers

Base dimension **600 x 400 mm**

Standard colour
pale blue

E Performance containers

Base dimension **600 x 400 mm**

Height 200 mm

Internal dimensions base		558 x 358 x 195 mm	
Stacking height		186 mm	
Usable internal height in stack		181 mm

Stacking containers SGL

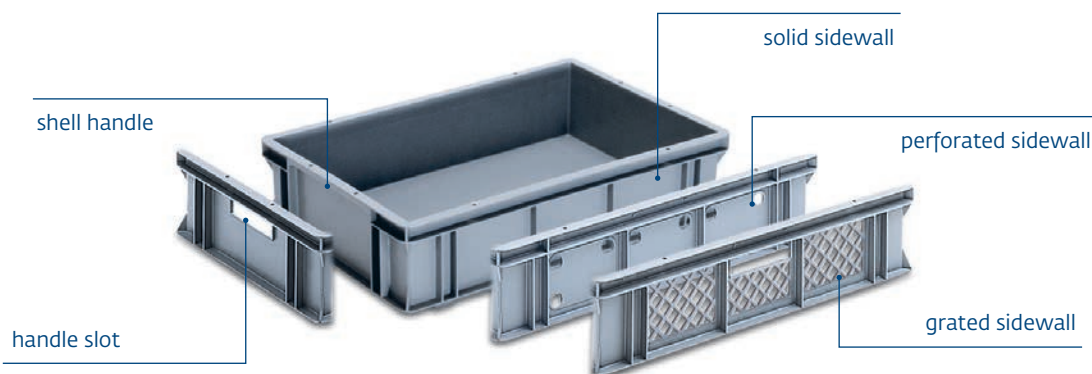

The standard in the flow of goods

"SGL" stands for "Swiss Association for Logistics". It has been their stated aim for several decades to employ means and methods with which to optimally streamline the flow of goods. The SGL guidelines therefore serve the purpose, amongst other things, of standardising the multiple-use containers made of plastic and creating the conditions to ensure that the containers are interchangeable. These requirements are fulfilled by the SGL stacking containers of Utz.

For each load a matching base version

When containers are used on an automatic conveyor system, the base deflexion should be approximately zero. Therefore, on SGL stacking containers, a ribbed base is used. Thanks to the perforated base or the grated base, a high level of air circulation or optimal drainage is guaranteed. All SGL bases enable safe composite stacking of a 600 x 400 mm container over two containers with basic dimensions of 400 x 300 mm.

Base dimension **400 x 300 mm**

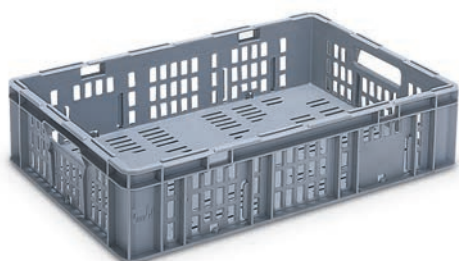

SGL 2000

Height **145 mm**

Type	A/N		
Internal dimensions base	358 x 258 x 129 mm
